

TABLE 2
ASSIGNED COORDINATING OPERATORS FOR RESERVOIR PRESSURE SURVEYS

- A 'Coordinating Operator' has been designated for the following pools having multiple operators. The coordinator, in collaboration with the other operators in the pool, drafts a schedule to ensure that a comprehensive survey is carried out and the minimum testing requirements are met. This mutually beneficial arrangement minimizes unnecessary testing. The coordinator is not responsible for surveying the wells or submitting results for other operators.
- For pools not listed below, a coordinating operator has not been assigned.
- It remains the responsibility of the individual well operator to ensure that the minimum testing requirements are met.
